

International Workshop “Targeting RNA world”

Dear colleagues!

Scientists of the Institute of Chemical Biology and Fundamental Medicine SB RAS cordially invites you to attend **International Workshop “Targeting RNA world”** in the frame of the project of Russian Scientific Foundation “New generation of RNA-targeting oligonucleotide derivatives as a platform for designing innovative therapeutics” (no. 14-44-00068). Workshop is being held in Park Inn by Radisson Pulkovskaya Hotel & Conference Centre St Petersburg, Pobeda square 1, Saint-Petersburg, Russia, **September 2-7 2018**.

We will discuss all aspects of RNA targeting with the purpose of target validation, oligonucleotide modification, functionalization and delivery, molecular modeling of RNA/oligonucleotide and RNA/protein complexes, development of RNA-targeting drugs and translational studies.

The Workshop participants have the opportunity to publish their results in special issue of in a peer-reviewed journal *Frontiers in Pharmacology*, section *Translational Pharmacology*, cited in Web of Sciences and Scopus entitled “*New advances in RNA targeting*”. Executive editor of special issue is Prof. Olga Ilinskaya from Kazan University (Russia). The information about special issue is on web-site of the journal.

We encourage you to submit the title and abstract of manuscript to Organizing Committee to consider the possibility of publishing in special issue “*New advances in RNA targeting*”.

We hope you will attend our International Workshop and find time to sample many of the unique features within the city of Saint-Petersburg.

Chairman of the Organizing Committee

Nadezhda Mironova
